EDUCATION

B.S. in Business Analytics and AI; Concentration in Marketing and AI

Expected Dec 2027

The University of Texas at Dallas, Naveen Jindal School of Management, Richardson, TX

Activities: AI in Business Club • UTD OCCM • UTD Focus

TECHNICAL SKILLS

Languages: Python, SQL, R, TypeScript, HTML/JS/CSS

Libraries: Pandas, NumPy, scikit-learn, statsmodels, HistGradientBoosting

Tools: Tableau, Excel, SAS, Jupyter, Git, SQLite, Firebase, Firestore

Eligibility: Eligible to work in the U.S. with no restrictions

PROFESSIONAL EXPERIENCE

BizFalcon AI bizfalconai.com, Founder & Analytics Lead

May 2026 – Present

- Launched [ProfitFalcon](#) for e-commerce brands: contribution margin by SKU, LTV/CAC by cohort, discount leakage by promo code and reorder timing from sell-through rates.
- Launched [ClientFalcon](#) for marketing agencies: ROAS and CAC by channel across an agency's full client book, ranked by an explainable account-health score.
- Engineered [BizFalcon Analyst](#), the shared engine underneath both, which writes and runs Python in-browser across a client's full dataset, not a sample. Authored **9 metric packs** and **11 guided statistical workflows** covering hypothesis testing, regression, cohort and time-series analysis, every formula exposed for audit.
- Designed a recommendation layer that names the next action with **projected dollar impact** and required approval, then scores each against its realized result.
- Built and operated the architecture end to end as **sole engineer**, briefly leading a three-person team: React, TypeScript, Firebase and Firestore, Pyodide, Stripe billing and Cloudflare DNS, with **3,600+ automated tests** passing under CI.

YMCA Central Texas, Summer Camp Counselor

May 2021 – Aug 2025

- Led groups of 15 to 25 campers across four summers, trained incoming counselors through a shadowing program, and earned Counselor of the Week five times and Rookie Counselor of the Year.

PROJECTS

Retail Customer Intelligence Platform

[Live Dashboard](#), [GitHub](#)

Python, scikit-learn, Pandas, RFM segmentation, market-basket analysis

- Analyzed **802,712 transactions** across 41 countries and £17.45M, segmenting customers into four tiers with K-means RFM and training a random-forest churn model that scored **0.796 ROC-AUC out of sample against a 55.3% base rate**.
- Sized the retention campaign with a **precision-at-k curve** showing the top 100 contacts are 90% true churners, and a cost model identifying contact capacity as the binding constraint. Generated Apriori rules with a top pair lift of 24x for cross-sell.

NBA Game Outcome Prediction Model

[Live Dashboard](#), [GitHub](#)

Python, HistGradientBoosting, Optuna, SQLite, nba_api

- Trained a gradient-boosted classifier on **10,624 real NBA games** across 9 seasons and validated it on the fully held-out 2024-25 season, reaching **66.4% accuracy against a 54.4% always-home baseline** with calibrated probabilities and TimeSeriesSplit.
- Ran a **feature ablation** to test whether the model's complexity earned its keep: Elo differential alone reached 0.710 AUC and the remaining 70 features added **0.015, inside the 0.021 spread across folds**. Retested on **1,230 unseen games** from 2025-26, isolating calibration as where the model adds value over a closed-form Elo.

Olist E-Commerce Revenue & Sales Analysis

[Live Dashboard](#), [GitHub](#)

Python, SQL, Pandas, Tableau, Excel

- Analyzed **96,478 e-commerce orders** across 9 source tables, joining them into a star schema and querying in SQL with CTEs and window functions. Health and Beauty led revenue at R\$1.4M of R\$15.4M.
- Modeled review scores with a logistic regression controlling for state, category and freight: each day of delay raised the odds of a low review **8.5%, or 1.78x over a one-week slip** (OR 1.085/day, n=95,824).
