EDUCATION

The University of Texas at Dallas — Naveen Jindal School of Management, Richardson, TX

Expected Dec 2027

B.S. in Business Analytics and AI | Concentration in Marketing and AI

Relevant Coursework: Data Science for Business Applications, AI in Business, Marketing Analytics, Database Analytics, Business Intelligence, Quantitative Business Analysis

Activities: AI in Business Club

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript (coursework in R, C++)

Tools & Libraries: Pandas, NumPy, scikit-learn, statsmodels, React, Tableau, Excel, Git, SQLite, Firebase

Methods: Machine learning, model validation, A/B testing, hypothesis testing, logistic regression, customer segmentation, data cleaning

PROFESSIONAL EXPERIENCE

BizFalcon AI — Founder & Analytics Lead

May 2026 – Present

Analytics products for e-commerce brands and marketing agencies | bizfalconai.com

- **ProfitFalcon (business analytics)** — built unit-economics analysis for e-commerce brands from Shopify, Amazon and WooCommerce order exports: contribution margin by SKU, LTV:CAC by acquisition cohort, discount leakage by promo code, and reorder timing from sell-through rates.
- **ClientFalcon (marketing analytics)** — built multi-client campaign analysis for agencies from Meta, Google Ads and GA4 exports: ROAS and CAC by channel, spend efficiency across an agency's whole client book, and an explainable account-health score ranking which accounts need attention first.
- **BizFalcon Analyst (free tier)** — the shared engine under both, run over a user's full dataset rather than a sample, with the formula behind every figure exposed.
- Designed a recommendation layer that turns those findings into prioritized actions with projected dollar impact, routes each through human approval, and scores the realized outcome against the projection to measure accuracy.
- Engineered the shared analysis engine and full stack — Python computation, React/TypeScript, Firebase, Stripe — with 3,000+ automated tests under continuous integration. Sole engineer through August 2026; briefly led a three-person team.

YMCA Central Texas — Summer Camp Counselor

May 2021 – Aug 2025

- Supervised groups of 15–25 campers across four summers and trained incoming counselors. Counselor of the Week (5×) and Rookie Counselor of the Year.

PROJECTS

Retail Customer Intelligence Platform | Python, scikit-learn, Pandas

[Live Dashboard](#)

- Segmented 802,712 transactions across 41 countries (£17.45M) into four value tiers using K-means RFM analysis, then built a churn model reaching 90% precision among top-ranked contacts.
- Sized the retention campaign with a cost model that identified outreach capacity, not budget, as the binding constraint; market-basket rules (24× top-pair lift) drove cross-sell targeting.

Olist E-Commerce Revenue & Delivery Analysis | Python, SQL, Tableau

[Tableau Dashboard](#)

- Modeled 96,478 orders from 9 source files into an 8-table star schema, querying it in SQL with CTEs and window functions.
- Quantified delivery impact on satisfaction: a one-week delay raised the odds of a negative review 1.78× after controlling for state, category, and freight cost. Published as a live Tableau dashboard.

NBA Game Outcome Prediction | Python, scikit-learn, SQLite

[GitHub](#)

- Trained a gradient-boosted classifier on 10,624 games across 9 seasons and validated it on a fully held-out season, reaching 66.4% accuracy against a 54.4% baseline.
- Ran a feature ablation demonstrating that 70 of 71 features contributed less signal than run-to-run variance, redirecting effort toward probability calibration rather than added complexity.

Universe Explorer | Python, Pandas, Astropy

[Live Demo](#)

- Cleaned and merged 10.2M records from four published astronomical catalogues (Gaia DR3, SDSS DR17, 2MRS, NASA Exoplanet Archive): dropped nulls and low-quality measurements, converted parallax to distance, reconciled coordinate systems, and deduplicated across catalogues into the 4.6M-object dataset the live site serves.
